

13-1 Angle Lake Water Main Replacement Project

The District owns and maintains small 4" and 6" diameter water main along the south and east side of Angle Lake in the City of SeaTac. The main is located within existing easements along the lake and is nearing the end of its useful life. The proposed project will replace approximately 7,000 lf of small diameter main with new, modern materials.

The District applied for and was selected for low-interest Public Works Trust Fund monies for the project. The anticipated project cost is \$2.61 million. Consultant selection will be completed by late 2011. The project will be phased with the initial focus being an alternatives analysis and preliminary public involvement during the first part of 2012. Once an alternative solution has been determined, design and permitting services will follow. Construction is anticipated in 2013 pending funding of the PWTF by the State Legislature. If funding is not allocated by the State, the District will need to reevaluate the timing of the construction.

Replace approx. 7,000 LF of 4" and 6" AC Main and related appurtenances.
