Highline Water District
Consumer Confidence Report
2012

Providing safe, clean water to residents of South King County since 1946
Highline Water District is pleased to provide our 2012 Consumer Confidence Report

This report describes the sources of your drinking water and how it compares to stringent standards set by regulatory agencies. Please take a few minutes to read through and familiarize yourself with the quality of water you use every day. If you have any questions please, contact our Operations Supervisor at 206-592-8920.

The Facts on Contaminants

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. As water travels over the surface of the land or through the ground, naturally-occurring minerals and, in some cases radioactive materials, dissolve in the water. Water can also pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water are microbes, pesticides, herbicides, organic and inorganic chemicals, and radioactive materials. More information about contaminants and potential health effects can be obtained by calling the EPA’s Safe Drinking Water Hotline: 1-800-426-4791.

ImmuNo-Compromised Persons

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants, can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. Environmental Protection Agency / Centers for Disease Control guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the:

Environmental Protection Agency
Safe Drinking Water Hotline
(800-426-4791)

Sources of Supply

On average, approximately 68 percent of Highline Water District’s water comes from Seattle Public Utilities - Cedar River supply. The remaining supply comes from Highline Water District’s groundwater wells. In the fall of 2012, the District completed construction of a new treatment plant at McMicken Heights Tank site. It is producing 5,000 gallons per minute of high quality water on a near continuous basis. Water from the District’s four wells - Angle Lake Well (S03), Des Moines Well (S02), Tyee Well (S04), and McMicken Well (S05), is directed to one of three treatment plants where it is filtered, treated and tested before it is blended with water from Seattle.
Physically Protected Sources

To preserve the high quality of water that originates in the Cedar River Watershed, recreational, agricultural and industrial activities in the area are not permitted. According to the Washington State Department of Health (DOH), all surface water has been rated highly susceptible, but the vulnerability is low due to the watershed protection afforded by Seattle Public Utilities' (SPU’s) Comprehensive Watershed Protection Plan.

Highline’s groundwater sources are protected by naturally occurring “confining layers” of material above the water bearing aquifer. This “restricted use” and “confining layers” protect the watershed and raw water quality from degradation and is the primary reason the DOH classified this water source as having “low vulnerability” to contamination. For a complete copy of the source water assessment, contact the regional DOH Drinking Water Office at (253) 395-6750.

Setting Drinking Water Standards

To ensure that tap water is safe to drink, the Environmental Protection Agency (EPA) adopts regulations setting water quality standards for public water systems. “Primary Standards” pertain to contaminants that could pose a health problem such as arsenic, while “Secondary Standards” pertain to aesthetic concerns such as iron and manganese. The Department of Health Drinking Water Division has been given the responsibility to ensure both primary and secondary water quality standards are met in Washington State. The Federal Food and Drug Administration and The Washington Department of Agriculture regulate contaminants in bottled water and are responsible for providing a similar level of public health protection.

Seattle Public Utility - Cedar River Supply

Although the water supply is aggressively protected, it goes through a treatment process to ensure that it is safe to drink. Before the water reaches Highline Water District, it goes through the six treatment steps outlined below:

* The water is screened to remove debris.
* Fluoride is added for dental health.
* Lime is added to control corrosion of plumbing materials.
* Ozone is added to disinfect the water.
* Water passes through Ultra Violet Light to destroy harmful organisms.
* Chlorine is added to provide a disinfectant residual.

Highline Water District - Well Water

Highline Water District pumps water from four wells and treats the water at three facilities. The District's treatment consists of the following:

* The water is filtered through greensand to remove low levels of manganese & iron.
* Chlorine is added to provide a disinfection residual.
* Fluoride is added for dental health.
* Sodium Hydroxide is added to control corrosion of plumbing materials.
Lead in Drinking Water

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Highline Water District is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking.

If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure, is available from the Safe Drinking Water Hotline - 1-800-426-4791, or on-line at www.epa.gov/safewater/lead.

Footnotes and Definitions

*Cryptosporidium was not detected in any samples from the Cedar River. 3 samples taken.

NTU - Nephelometric Turbidity Unit: Turbidity is a measure of how clear the water looks.

**Average represents the 90th percentile (2010) 90% of the samples were less than the values shown.

TT - Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.

MRDL - Maximum Residual Disinfectant Level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

MRDLG - Maximum Residual Disinfectant Level Goal: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLG's do not reflect the benefits of the use of disinfectants to control microbial contaminants.

MCLG - Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLG's allow for a margin of safety.

MCL - Maximum Contaminant Level: The highest level of contaminant that is allowed in drinking water. MCL's are set as close to the MCLG's as feasible using the best available treatment technology.

AL - Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

ppm - One part per million

NA - Not Applicable

+ Not a health based regulatory standard - EPA does list a “Lifetime Health Advisory Level” of 70 ppb.

This table shows all of the drinking water contaminants that we detected during the calendar year of this report. The presence of contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Upon request, we will provide you with a list of compounds we looked for but did not find. See page 7 for footnotes and definitions.
Well Head Protection

The District’s Wellhead Protection Program monitors the types of businesses and activities that surround our wells to protect this hidden resource. The District notifies property owners and regulatory agencies of the District’s water source locations. These notifications help prevent potentially harmful contaminants from polluting our water. These exercises contribute to the “low vulnerability” the Water District’s groundwater has to contamination.

On average, each person in the region uses about 84 gallons of water each day throughout the year. Many of us use a large amount of water for outdoor activities such as gardening, washing cars, pressure washing and watering the lawn.

The year-round average for outdoor water use is 30 gallons per day (gpd). Summertime use averages 85 gpd.

Indoor water use accounts for the rest of our daily averages. Toilets top the chart at 19 gallons per person per day. Showers and clothes washers are a close second at 13 gallons per person per day. Think about the many ways you can conserve water.

Water conservation helps salmon, as well as your pocketbook. The foundation for healthy salmon populations is healthy habitat – including the quantity and quality of water in the streams that support them. Your actions to conserve water help protect this precious freshwater habitat for salmon and other species that live in and around our streams.
Conservation

Highline Water District (HWD) customers have continued to do their part with water conservation. Conservation saves you money, protects fish and wildlife, and helps ensure a reliable future supply despite regional growth and climate uncertainty.

Because of water-efficient fixtures, new practices in landscaping, and business and residential conservation efforts, we’ve been able to reduce per-person water consumption from 92.2 to just 83.6 gallons per day, or 14% in the past six years. For the future, we’ve set a six-year conservation goal that will continue to reduce per-person water use. To learn ways to save water in your home or business, visit www.savingwater.org, or call 206-684-7283 for more water saving advice.

Commercial, industrial, and institutional customers of Highline Water District are eligible to receive rebates for toilets, irrigation sprinkler systems, and water-using equipment. Get additional information from the Resource Venture at 206-343-8505 or www.resourceventure.org.

Water Use Efficiency

During 2012, Highline Water District produced and purchased a total of 2,182,074,576 gallons of water for our customers. Authorized consumption of this water totaled 2,004,647,480 gallons with a water loss of 177,427,096 gallons for a Distribution System Water Loss of 8.1%. The Washington State Department of Health has set a goal of less than 10% for water loss.

Highline continues its extensive effort to determine the causes of the water loss. Primary areas of concern include:

* Water meter discrepancies
* Fire Department uses
* Old, leaking water pipes
* Leaking hydrants
* Unauthorized connections
* Water theft from hydrants
Highline Water District

Mission Statement

“Our mission is to provide high quality water and excellent customer service while effectively managing District infrastructure for a reliable water system today and for future generations.”

Board of Commissioners:
Daniel Johnson, Board President
Kathleen Quong-Vermeire, Secretary
Gerald R. Guite, Commissioner
Vince Koester, Commissioner
George Landon, Commissioner

Staff:
Matt Everett, General Manager
Jeremy DelMar, P.E., Engineering Manager
Debbie Prior, Finance Manager
Mike Becker, Operations Supervisor

Highline Water District is located south of Seattle, WA and generally extends from just east of Interstate Highway 5 on the east to the Puget Sound on the west, and from State Route 518 on the north to South 284th Place on the south. The District lies within portions of the cities of Burien, Des Moines, Federal Way, Kent, Normandy Park, SeaTac, and Tukwila. Portions of the District are also within the limits of unincorporated King County. Regular Board Meetings are held the 1st Wednesday each month at 9:00 AM, the 3rd Wednesday each month at 4:00 PM, and the Workshop meeting is held the 4th Tuesday each month at 9:00 AM. All meetings are open to the public. The District office is located at 23828 30th Ave S., Kent, WA. Please go to our website www.highlinewater.org for driving directions and other information.
